

# DELFIN REOPENING GUIDE

## MEASURE TEMPERATURE

### Use measuring devices

Make sure you measure the temperature to your employees before they enter the company with automatic devices or infrared thermometers. Remember the maximum temperature must not exceed 37.5°.

## CLEAN SURFACES

### Common areas and departments always clean

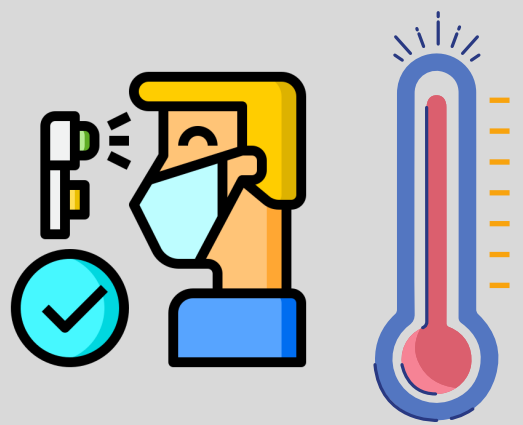

Clean your entire company, including departments and offices, with an industrial vacuum cleaner that allows you to remove dust, granules and debris to ensure a surface ready to be disinfected.

## SOCIAL DISTANCING

### Ensures distances between workers

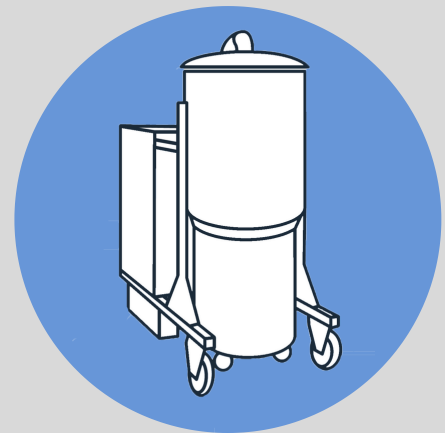

Provide your company with the right measurements and equipment that can guarantee the distance between people of at least 1 metre.

## PROVIDE PPE

### Masks and sanitizers for everyone

Deliver face masks to your employees promptly to protect them from contamination risks and plan for sanitizing columns at strategic points of your business

## MOVE ON TO DISINFECTION

### Eliminate viruses and bacteria

Use disinfectant products (biocides or medical surgical devices) authorised by the Ministry of Health, such as alcohol at 70-90% concentration, to disinfect previously cleaned surfaces several times a day.
